

The industrial water treatment reference

ION EXCHANGE, FILTRATION, MEMBRANE SEPARATION, ELECTRODEIONIZATION, UV STERILIZER, OZONE...

Our Activities

- ◆ Auditing
- ◆ Studies
- ◆ Revamping
- ◆ Design
- ◆ Manufacture
- ◆ Implementation
- ◆ Field service
- ◆ Certifications
- ◆ Training
- ◆ Maintenance

Technical products

■ Our Technical Products Department provides to water treatment companies and systems integrators ready-to-use equipment which are skid mounted.

As part of our specialized engineering and design activities, we can test all standard membrane equipment prior to dispatch to our Customers.

We have developed a state-of-the art range of electrodeionization units from 0,5 to 10m³/h and ultrafiltration units from 3,5 to 50 m³/h.

Specific units adapted to each OEM are also developed on demand.

This technology allows to produce water having a resistivity close to 18 MegaOhms without using any regeneration chemical.

- ◆ Reverse osmosis
- ◆ Ultrafiltration
- ◆ Sand filters
- ◆ Iron removal filters
- ◆ Multi-media filters
- ◆ Electrodeionization
- ◆ Softeners
- ◆ Filters / Cartridges
- ◆ Dosing systems
- ◆ UV sterilizers / Ozone

Complete solutions

■ Epuro's engineering and design Department have large expertise using water treatment technology in the design of installations used for production of pure and ultrapure water. We can fulfill the most stringent tests of quality required in our Customer's specifications.

Our Engineers manage and supervise also the on-site operations.

They are responsible for the start-up and manage the qualification procedures as well as the training of the operating personnel. All over the project, our Engineers accompany you to ensure your satisfaction.

Epuro's service Department can provide spare and consumables for water equipments and any redesign and upgrading you require, as well as perform yearly-based maintenance programs.

Our Applications

Food & beverage / Cosmetic

- Mineral waters
- Drinking water
- Sodas and fruit juices
- Beer and wine

Pharmaceuticals & Health

- Purified and highly purified water
EP, USP
- PSG water for injection, pure steam
- Cleaning and rinsing water
- Pretreatment and reuse

Energy

- Purified water
- Cooling water
- Steam production
- Water rinsing

Leisure & Environment

- Spa and pool water
- Washing machine
- Refining of drinking water (Fe, Mn, As...)
- Reuse

ECODYNE
Industrial

Our water companies are among the world's long-experienced water technology companies. Complete custom designed treatment systems are available for potable water, boiler feedwater, brine and specialized process & solids recovery; and the cooling of water for use, recycle or discharge.

Our systems are found in major industries, power generating plants and in many municipal water treatment plants and are operating in diverse conditions in more than thirty countries around the world.
